

Who we are

We specialize in providing steel detailing services through Building Information Modeling. This system streamlines the collaboration between steel fabricators, steel detailing offices and engineering companies. As our staff has worked with several fabricators and different engineering firms in their past projects, we were able to put in place tried and tested procedures that guarantee success in all our engagements.

BIM-Based Steel Detailing

What we do

- 'Fabricatable' Drawings detailed by Engineering Graduates with years of experience in BIM technology
- Technical consultancy by experts who have worked around the globe
- Efficient Connection Design

[More Details](#)

3D Models can store any information that is important to you creators name, delivery date, mother-in-laws birthday, or the next scheduled maintenance date we can store it, act upon it, and visualize it for you.

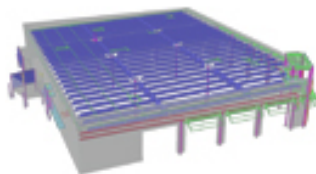

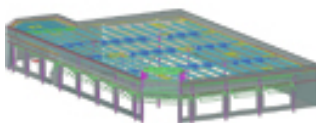

Why engage our services

Our portal gives our clients access to production files and invoices

Full back-office support for projects

- Multiple FTP - we have two FTP sites and multiple static IPs
- Full Access to live production files - we give clients access to production drawings, INPs, and DB1s
- Online invoice - know where the hours go for each billing anytime, anywhere
- A dedicated client area - we have a portal created specifically

Extensive experience

Our experience goes back to the mid 80's (draw with lead, erase with rubber) and has advanced to Tekla and/ or Gritec created 3D models.

We've seen a lot, made many mistakes, and tried scores of improvements. Use that experience to your benefit, don't make the same mistakes we have already made.

[Call us, it won't hurt that bad, and will cost you a lot less in the long run.](#)
